DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3/1, 7/1, 14/1, 19/1-22/1 and 24/1, drawn to a gelatin-based substrate, classified in class 428, subclass 478.2, class 435, subclasses 180 and 960, and class 436, subclasses 528, 531 and 809.
- II. Claims 2, 3/2, 4-6, 7/2, 8-13, 14/2, 15-18, 19/2-22/2, 23 and 24/2, drawn to a gelatin-based substrate, classified in class 428, subclass 478.2, class 435, subclasses 181 and 960, and class 436, subclasses 528, 532 and 809.
- III. Claim 25, drawn to a method of making the substrate of Group I, classified in class 428, subclass 478.2, class 435, subclasses 180 and 960, and class 436, subclasses 528, 531 and 809.
- IV. Claims 26-29, drawn to a method of making the substrate of Group II, classified in class 428, subclass 478.2, class 435, subclasses 181 and 960, and class 436, subclasses 528, 532 and 809.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and of Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as

capable of use together and they have different modes of operation, different functions, or different effects.

Inventions of Group III and of Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are produced using different steps, are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects.

Inventions of Group I and of Group III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make other and materially different substrates.

Inventions of Group II and of Group IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make other and materially different substrates.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Due to the complexity of the restriction requirement, a telephone call was not made to request an oral election to the above restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
